Description of Target	TNKS-1 mRNA in urine sediment from patients with bladder TCC correlated with tumor stage, and higher preoperative levels were associated with increased risk of early recurrence. Tankyrase-1 is required in the assembly of bipolar spindles and the spindle-pole protein NuMA as a substrate for covalent modification by tankyrase-1. Data also show that tankyrase 1 inhibition in human cancer cells enhances telomere shortening by a telomerase inhibitor and hastens cell death.
Protein Interactions	UBC; RNF219; SPC25; RABGEF1; DCTN3; SPTBN1; NLK; CSNK2A1; CNOT6L; CNOT6; VCP; HNRNPK; DYNC1H1; CBX3; SIRT7; TSG101; Cnot3; Capza1; TNKS2; TNKS;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
