Reference	Liu,D., (2008) Arterioscler. Thromb. Vasc. Biol. 28 (4), 746-751
Description of Target	TRPC6 forms a receptor-activated calcium channel in the cell membrane. The channel is activated by diacylglycerol and is thought to be under the control of a phosphatidylinositol second messenger system. Activation of this channel occurs independently of protein kinase C and is not triggered by low levels of intracellular calcium. Defects in this gene are a cause of focal segmental glomerulosclerosis 2 (FSGS2).
Protein Interactions	RNF24; TRPC3; ORAI1; TRPM2; TRPC6; SRC; ITPR3; MX1; FYN; TRPC7; TRPC5; TRPC4; TRPC1; TRPC2; ITPR1;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
