Description of Target	SHB is the adapter protein which regulates several signal transduction cascades by linking activated receptors to downstream signaling components. SHB may play a role in angiogenesis by regulating FGFR1, VEGFR2 and PDGFR signaling. SHB may also play a role in T-cell antigen receptor/TCR signaling, interleukin-2 signaling, apoptosis and neuronal cells differentiation by mediating basic-FGF and NGF-induced signaling cascades. SHB may also regulate IRS1 and IRS2 signaling in insulin-producing cells.
Protein Interactions	SLC39A1; GRAP2; LAT; LCP2; EPS8; JAK3; IL2RG; KDR; SRC; ZAP70; PDGFRA; PLCG1; PIK3R1; VAV1; CRK; JAK1; IL2RB; GRB2; FGFR1; PDGFRB;
Reconstitution and Storage	All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding.
