| Description of Target                          | App functions as a cell surface receptor and performs physiological functions on the surface of neurons relevant to neurite growth, neuronal adhesion and axonogenesis. It is involved in cell mobility and transcription regulation through protein-protein interactions.   |
| Protein Interactions                           | Ranbp9; Cpeb1; Bace1; Snca; Prnp; Gga1; Stub1; Ubc; Kif1a; Mm̄; Mapk8ip2; Mapk8ip1; Dab1;  |
| Reconstitution and Storage                     | All conjugated antibodies should be stored in light-protected vials or covered with a light protecting material (i.e. aluminum foil). Conjugated antibodies are stable for at least 12 months at 4C. If longer storage is desired (24 months), conjugates may be diluted with up to 50% glycerol and stored at -20C to -80C. Freezing and thawing conjugated antibodies will compromise enzyme activity as well as antibody binding. |
