Aposcreen Annexin V Apoptosis Kit : PE (OKSB00008)

Data Sheet

Product Number	OKSB00008
Product Page	www.avivaysbio.com/aposcreen-annexin-v-apoptosis-kit-pe-oksb00008.html
Name	Aposcreen Annexin V Apoptosis Kit : PE (OKSB00008)
Conjugation	R-PE
Host	Expressed in E. coli
Reference	<ol style="list-style-type: none"> 1. Cohen, J.J. 1991. Adv. Immunol. 50:55 2. MacDonald, HR, and R.K. Lees. 1990. Nature 343:642 3. Liu, Y.J., et al. 1989. Nature 342:929 4. Application Kit	<ul style="list-style-type: none"> - 1 mL Annexin V- FITC: Store at 2- 8 C. Use as directed; no pre- dilution necessary - 1 mL propidium iodide: Store at 2- 8 C. Use as directed; no pre- dilution necessary. Avoid skin contact and dispose of properly - 7 x 1.5 mL 10X binding buffer: Store at 2- 8 C. Dilute 1 part 10X buffer with 9 parts dH2O prior to use <p>Note: Annexin V is produced by Aviva Systems Biology</p>
Reconstitution and Storage	Store at 2-8C
Datasheets/Manuals	Printable datasheet for Aposcreen Annexin V Apoptosis Kit : PE (OKSB00008)
Additional Information	<p>Description: ApoScreen Annexin V Apoptosis Kit-PE employs a R-phycocerythrin-conjugated Annexin V (Annexin V-PE) in concert with 7-Aminoactinomycin D (7-AAD) to evaluate subpopulations of cells undergoing apoptosis. During the early stages of apoptosis, cells begin to display phosphatidylserine (PS) on the outer cell membrane where it is readily detectable by staining the cells with Annexin V-PE. As the plasma membrane becomes increasingly permeable during the later stages of apoptosis, 7-AAD can readily move across the cell membrane and bind to cellular DNA, providing a means for identifying those cells that have lost membrane integrity through mechanisms including necrosis. When cells are double stained with Annexin V-PE and 7-AAD, three different cell populations may be observed - (i) live cells that do not stain with either Annexin V-PE or 7-AAD; (ii) necrotic cells that stain with both reagents; and (iii) apoptotic cells that stain with Annexin V-PE only. Analysis may be performed on any flow cytometer equipped with a single laser using excitation at 488 nm.</p>
Assay Info	The ApoScreen Annexin V Apoptosis Kit employs a fluorescein- labeled annexin V (annexin V- FITC) in concert with propidium iodide (PI) to evaluate subpopulations of cells undergoing apoptosis. During the early stages of apoptosis, cells begin to display PS on the outer cell membrane where it is readily detectable by staining the cells with annexin V-FITC. As the plasma membrane becomes increasingly permeable during the later stages of apoptosis, PI can readily move across the cell membrane and bind to cellular DNA, providing a means for identifying those cells that have lost membrane integrity through mechanisms including necrosis. When cells are double stained with annexin V- FITC and PI, three different cell populations may be observed (Figure 2): (i) live cells that do not stain with either annexin V- FITC or PI; (ii) necrotic cells that stain with both reagents; and (iii) apoptotic cells that stain with annexin V- FITC only. Analysis can be performed on any flow cytometer equipped with a single laser using excitation at 488 nm. Alternatively, the cells can be examined with a fluorescence microscope equipped with filters for discrimination of FITC and rhodamine/PI.
Application	FC

AVIVA SYSTEMS BIOLOGY manufactures and sells quality antibody products covering genome wide proteins.

This product is for Research Use Only. Not for diagnostic, human, or veterinary use.
Optimal conditions of its use should be determined by end users.
