ORIGIN USA

PRODUCTION Antiserum was cross adsorbed using bovine, horse, human, mouse & sheep immunosorbents to **PROCEDURES**

remove cross reactive antibodies. The antibody to rat IgG was isolated by affinity

chromatography using antigen coupled to agarose beads and conjugated to DyLight® 594.

Antibody concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4

equals 1.0 mg of IgG.

By immunoelectrophoresis and ELISA this antibody reacts specifically with rat IgG and with light

chains common to other rat immunoglobulins. No antibody was detected against non-

immunoglobulin serum proteins. Less than 1% cross reactivity to bovine, horse, human, mouse &

sheep IqG was detected. This antibody may cross react with IqG from other species.

APPLICATIONS Centrifuge tube to remove product from lid. Optimal working dilutions should be determined

experimentally by the investigator. Prepare working dilution immediately before use.
