Antibody was affinity purified using an epitope specific to FANCI immobilized on solid support.
The epitope recognized by A300-212A-T maps to a region between residues 200 and 250 of human Fanconi anemia (FA) complementation group I using the numbering given in TrEMBL entry Q9NVII (GeneID 55215).

Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use.

Western Blot 1:1000
Immunoprecipitation
The antibody contained within A300-212A-T has been qualified for use in immunoprecipitation; however, we recommend using the alternative formulation of this antibody found as product A300-212A.

Western blot of immunoprecipitates performed using Normal Pig Serum (Cat. No. S100-020), Goat anti-Rabbit Light Chain HRP Conjugate (Cat. No. A120-113P) and 4-8\% SDS-PAGE (link to IP-western blot protocol in Additional Info section below).
