By immunoelectrophores Cross reactivity with IgM react with IgG from othe Centrifuge tube to remove experimentally by the inv Western Blot Immunohistochemistry Immunocytochemistry ELISA Not all listed applications	 WB, IHC, ICC, ELISA Human 1 ml 1 mg/ml 2 - 8°C / 1 year from date of receipt Liquid Phosphate Buffered Saline (PBS) containing 0.2% BSA and 0.05% Pro-Clean 400 IgG USA Antiserum was solid phase adsorbed to ensure class specificity. The antibody was isolated by affinity chromatography using antigen coupled to agarose beads and conjugated to horseradish peroxidase (HRP). Antibody concentration was determined by extinction coefficient prior to conjugation: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG. Molar enzyme/antibody protein ratio is 4:1. By immunoelectrophoresis and ELISA this antibody reacts specifically with human IgG. Cross reactivity with IgM, IgA and light chains is less than 1%. This antibody may cross react with IgG from other species. Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use. Western Blot 1:5,000 - 1:50,000 Immunocytochemistry 1:200 - 1:50,000
