Data Sheet

HDAC Assay Developer

Catalog #: 50030

Lot#: 160922

DESCRIPTION: HDAC assay developer is an essential reagent for signal generation in HDAC or sirtuin assays performed with any of BPS Bioscience's HDAC fluorimetric substrates (e.g. Cat. #50032). An appropriate fluorimetric substrate, comprising an acetylated lysine side chain, is first incubated with a sample containing HDAC activity (nuclear or cellular extract, purified enzyme, bead-bound immunocomplex, etc.). Deacetylation of the substrate sensitizes it so that, in a second step, treatment with the HDAC assay developer produces a fluorophore. Trichostatin A is included as an 'inhibitor stop' for class I and II HDACs.

APPLICATIONS: Study of HDAC or sirtuin kinetics, regulation and inhibitor sensitivity. Ideal for drug discovery and HTS applications and cell-based HDAC assays.

SUPPLIED AS: A 2x concentrate.

QUANTITY: 6 ml

STORAGE: -70°C. Store, long term, only as the 2x concentrate, at -70°C. Concentrate is stable for at least 3 freeze-thaw cycles, but care should be taken that both freezing and thawing steps are done quickly (e.g. liquid N₂ or dry ice/EtOH for freezing, rapid finger-rubbing for thawing). Frozen storage of smaller aliquots is recommended.
