Storage and Handling

Store at 4°C, protected from light. Storage at -20°C is not recommended for R-PE conjugates. Product is stable for at least 6 months from date of receipt when stored as recommended.

Product Description

The products are prepared by labeling IgG (H+L) with R-phycoerythrin. R-PE belongs to the family of phycobiliproteins, which are derived from cyanobacteria and eukaryotic algae. R-PE has absorption maxima at 496, 546, and 565 nm respectively and emission at 578 nm. Because of the high extinction coefficient (~1,960,000) and high fluorescence quantum yield (~0.82), R-PE is by far the brightest dye for the 565 nm wavelength region.

For most fluorescent secondary antibody applications, a concentration of 1 - 10 µg/mL is sufficient; however, optimal conditions should be determined empirically.
