Product Description

This product is prepared by labeling IgG (H+L) or recombinant streptavidin with recombinant alkaline phosphatase. Alkaline phosphatase conjugates could be used for Western Blot, ELISA, immunohistochemistry and other standard immunoassay applications.

For most secondary antibody applications, a concentration of 1 - 10 µg/mL is sufficient; however, optimal conditions should be determined empirically.

Alkaline phosphatase requires phosphate-free buffer with bivalent metal ion (eg. Mg²⁺) to catalyze the reaction of substrates. After antibody binding, it is recommended to wash the sample with alkaline phosphatase reaction buffer (100 mM Tris-HCl; 100 mM NaCl; 50 mM MgCl₂; 0.2% Tween-20; pH 9.0) before adding the substrates.
