STORAGE AND HANDLING:

Store desiccated at -20 °C. Protect from light, especially when in solution

APPLICATION:

Membrane-permeant form and thus can be loaded into cells via incubation. Because of the relatively low water solubility of the AM ester, Pluronic F-127 (See **59000** and refs. therein), a mild detergent, is often used as a dispersing agent to facilitate the loading. Indo-1/AM itself does not bind Ca²⁺, but it is readily hydrolyzed to indo-1 by endogenous esterases once the dye is inside the cells.
