Product Information

6X DNA Loading Buffers

Product List

Catalog no.	Product	Size	Tracking dyes*
99859-1	6X DNA Loading Buffer (Orange)	4 x 1.5 mL	Orange (50 bp)
99962-1	6X DNA Loading Buffer (Blue)	4 x 1.5 mL	Light blue (1500 bp) Dark blue (200 bp)

*Approximate migration of tracking dye in 1% agarose gel.

Storage and Handling

Product is stable for at least 6 months from date of receipt when stored at 4°C, or at least 24 months from date of receipt when stored at -20°C.

Product Description

6X Loading Buffers contains density agents for loading DNA samples on agarose or polyacrylamide gels, with tracking dyes to visually monitor electrophoresis. 6X DNA Loading Buffer (Blue) contains two blue tracking dyes. The light blue dye runs at approximately 1.5 kb, and the dark blue dye runs at approximately 200 bp in a 1% agarose gel.

6X DNA Loading Buffer (Orange) contains a single orange tracking dye that runs at approximately 50 bp in a 1% agarose gel. Unlike blue tracking dyes, the orange dye does not overshadow fluorescently stained DNA, making it useful for visualizing low molecular weight bands. It is also recommended for use with Biotium's DNAzure® Blue Visible Blue Nucleic Acid Gel Stain (see Related Products).

These loading buffers do not contain fluorescent dye for detecting DNA bands. For convenient one-step loading and DNA staining, we offer 6X GelRed® Prestain Loading Buffers (see Related Products). PCR products from EvaGreen® or EvaGreen® Plus qPCR reactions can be visualized on gels using a SYBR® Green filter without additional fluorescent dye. We also offer easy-to-use GelRed® or GelGreen® coated agarose.

Protocol

Add 1 volume of 6X loading buffer for every 5 volumes of DNA sample for a final concentration of 1X loading buffer. Mix thoroughly and load on gel.
