<b>Synonyms:</b>	SPHK1, SPK1, SK1
<b>Storage:</b>	-20°C (as supplied)
<b>Stability:</b>	≥2 years

### Procedures

---

This vial contains 200 µg peptide lyophilized from TBS, pH 7.4. Resuspend the peptide in 200 µl of deionized water. The SPHK1 blocking peptide (human SPHK1 amino acids 264-274) can be used in conjunction with Cayman's SPHK1 Polyclonal Antibody (Item No. 10006822) to block protein-antibody complex formation during immunochemical analysis of SPHK1.

To block antibody/protein complex formation, the following procedure is recommended:

1. Mix the SPHK1 Polyclonal Antibody (Item No. 10006822) and blocking peptide together in a 1:1 (v/v) ratio in a microfuge tube. For example, mix 40 µl of antibody and 40 µl of peptide.\*
2. Incubate for one hour at room temperature with occasional mixing prior to further dilution and application of the mixture to the immunoblot.
3. Dilute the mixture to the final working antibody concentration and apply to the slide or membrane as usual.

\*This is a recommended mixture. The minimum amount of peptide needed for complete blocking has not been precisely determined and may vary depending on the sample being analyzed. The amount of peptide required may need to be increased if sufficient blocking does not occur.
