PRODUCT INFORMATION

Transcription Factor PPAR α Positive Control

Item No. 10007441

Laboratory Procedures

One vial contains 150 μ l clarified cell lysate containing human recombinant PPAR α protein. This lysate is provided as a positive control for PPAR α activation in the PPAR α Transcription Factor Binding Assay Kit (Item No. 10006915). It is recommended that the positive control be aliquoted at 20 μ l per vial and stored at -80°C to avoid loss in signal from repeated freeze/thaw cycles. The thawed protein should be stored on ice. Dilute 10 μ l of the positive control with 90 μ l of diluted Transcription Factor Binding Assay Buffer (Item No. 10006880) prior to assaying in the PPAR α Transcription Factor Assay Kit. The cell lysate will provide a strong signal (>0.5 AU at 450 nm) when used at 10 μ l/well. This solution will be stable for one year when aliquoted and stored at -80°C.

CAUTIONS

For laboratory research use only. This reagent is not for human or veterinary use. This product has been tested and formulated to work exclusively with the PPAR α Transcription Factor Assay Kit from Cayman (Item No. 10006915). This product may not perform as described if used with other assay reagents or protocols.

WARNING

THIS PRODUCT IS FOR RESEARCH ONLY - NOT FOR HUMAN OR VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

SAFETY DATA

This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the [complete](#) Safety Data Sheet, which has been sent via email to your institution.

WARRANTY AND LIMITATION OF REMEDY

Buyer agrees to purchase the material subject to Cayman's Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.
