PRODUCT INFORMATION

Cytokeratin Monoclonal PE Antibody (Clone C-11)

Item No. 10478

Overview and Properties

Contents:	This vial contains 100 µg of protein A-purified, PE-labeled monoclonal antibody.
Synonyms:	CKs, pan-Cytokeratin, Keratin
Cross Reactivity:	(+) Cytokeratins 4, 5, 6, 8, 10, 13, and 18
Species Reactivity:	(+) Human
Form:	Lyophilized
Storage:	-20°C (as supplied)
Stability:	≥1 year
Storage Buffer:	100 mM sodium phosphate, pH 7.4, with 50 mM sucrose, 150 mM sodium chloride, 0.1% BSA, and 2 mM sodium azide when reconstituted in 1 ml double distilled water
Clone:	C-11
Host:	Mouse
Isotype:	IgG1
Applications:	Flow cytometry (FC) and Immunofluorescence (IF). The recommended starting dilution for FC and IF is 5-10 µg/ml. Other applications were not tested, therefore optimal working concentration/dilution should be determined empirically.
Miscellaneous:	Avoid exposure to heat and light

WARNING
THIS PRODUCT IS FOR RESEARCH ONLY - NOT FOR HUMAN OR VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

SAFETY DATA
This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the complete Safety Data Sheet, which has been sent via email to your institution.

WARRANTY AND LIMITATION OF REMEDY
Buyer agrees to purchase the material subject to Cayman's Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.

PRODUCT INFORMATION

Description

Cytokeratins (CKs) are intermediate filaments proteins and members of the cytokeratin protein family.¹⁻³ The cytokeratin family is composed of at least 20 unique gene products, which fall into two categories: type I acidic cytokeratins, CK9-CK20, and type II neutral-basic cytokeratins, CK1-CK8.² Each cytokeratin is composed of a central rod containing four α -helical domains, which are important for self-assembly, and non-helical head and tail domains at the N- and C-termini, respectively.^{2,3} Cytokeratins are major structural proteins expressed in epithelial cells and localized to the cytoplasm where they form heterozygous type I-type II pairs.^{1,4} They primarily function to protect epithelial cells from mechanical and non-mechanical stresses that induce cell rupture and death.² Cytokeratins have additional isoform- and tissue-specific functions, including the modulation of protein synthesis and cell size during epithelial growth and roles in skin pigmentation. Cayman's Cytokeratin Monoclonal PE Antibody (Clone C-11) can be used for flow cytometry (FC) and immunofluorescence (IF) applications. This antibody recognizes cytokeratins 4, 5, 6, 8, 10, 13, and 18 from human samples.
