# PRODUCT INFORMATION

# Prostaglandin B<sub>2</sub>

Item No. 11210

CAS Registry No.: 13367-85-6

Formal Name: 9-oxo-15S-hydroxy-prosta-

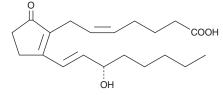

5Z,8(12),13E-trien-1-oic acid

Synonym: MF:  $C_{20}H_{30}O_4$ FW: 334.5 ≥98% **Purity:** 

 $\lambda_{max}$ : 278 nm  $\epsilon$ : 26,000 UV/Vis.: Supplied as: A solution in methyl acetate

Storage: -20°C Stability: ≥2 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

### **Laboratory Procedures**

Prostaglandin B<sub>2</sub> (PGB<sub>2</sub>) is supplied as a solution in methyl acetate. To change the solvent, simply evaporate the methyl acetate under a gentle stream of nitrogen and immediately add the solvent of choice. Solvents such as ethanol, DMSO, and dimethyl formamide purged with an inert gas can be used. The solubility of PGB<sub>2</sub> in these solvents is approximately 100, 50, and 75 mg/ml, respectively.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. If an organic solvent-free solution of PGB<sub>a</sub> is needed, it can be prepared by evaporating the methyl acetate and directly dissolving the neat oil in aqueous buffers. The solubility of PGB2 in PBS (pH 7.2) is approximately 2.0 mg/ml. We do not recommend storing the aqueous solution for more than one day.

#### Description

PGB<sub>2</sub> is a non-enzymatic dehydration product resulting from the treatment of PGE<sub>2</sub> or PGA<sub>2</sub> with strong base. It has weak agonist activity on TP receptors and can increase pulmonary blood pressure in the rabbit at relatively high doses (5 µg/kg).1
