# PRODUCT INFORMATION

## Niclosamide (ethanolamine salt)

Item No. 17118

**CAS Registry No.:** 1420-04-8  
**Formal Name:** 5-chloro-N-(2-chloro-4-nitrophenyl)-2-hydroxybenzamide compd. with 2-aminoethanol  
**Synonyms:** BAY-73, BAY-6076, Bayer 73, Bayer 6076, HL 2448  
**MF:** C<sub>13</sub>H<sub>8</sub>Cl<sub>2</sub>N<sub>2</sub>O<sub>4</sub> • C<sub>2</sub>H<sub>7</sub>NO  
**FW:** 388.2  
**Purity:** ≥98%  
**UV/Vis.:** λ<sub>max</sub>: 210, 235, 331 nm  
**Supplied as:** A crystalline solid  
**Storage:** -20°C  
**Stability:** ≥2 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

### Laboratory Procedures

Niclosamide (ethanolamine salt) is supplied as a crystalline solid. A stock solution may be made by dissolving the niclosamide (ethanolamine salt) in the solvent of choice. Niclosamide (ethanolamine salt) is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF), which should be purged with an inert gas. The solubility of niclosamide (ethanolamine salt) in ethanol is approximately 0.25 mg/ml and approximately 30 mg/ml in DMSO and DMF.

Niclosamide (ethanolamine salt) is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, niclosamide (ethanolamine salt) should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. Niclosamide (ethanolamine salt) has a solubility of approximately 0.5 mg/ml in a 1:1 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

### Description

Niclosamide is a molluscicide.<sup>1</sup> It is toxic to *H. trivolvis* snail eggs, juveniles, and adults (LC<sub>50s</sub> = 0.035, 0.044, and 0.11 mg/kg, respectively), as well as rainbow trout, white sucker, and fathead minnow (LC<sub>50s</sub> = 0.03, 0.09, and 0.11 mg/L, respectively).<sup>1,2</sup> Niclosamide induces cell cycle arrest at the G<sub>0</sub>/G<sub>1</sub> phase and induces apoptosis in DU145 human prostate cancer cells in a concentration-dependent manner.<sup>3</sup> It inhibits STAT3-induced gene expression in a reporter assay using HeLa human cervical cancer cells when used at a concentration of 5 μM. Niclosamide (1 μM) uncouples mitochondria from respiration and increases the oxygen consumption rate of NIH3T3 mouse fibroblasts.<sup>4</sup> Dietary administration of niclosamide (1,500 ppm) reduces blood glucose and plasma insulin levels, as well as decreases liver weight and triglyceride levels, in a mouse model of high-fat diet-induced diabetes.<sup>4</sup> Formulations containing niclosamide have been used in the control of molluscs in aquatic settings.
