# **PRODUCT** INFORMATION

#### Cardamonin

Item No. 18310

CAS Registry No.:	19309-14-9	
Formal Name:	(2E)-1-(2,4-dihydroxy-6-	
	methoxyphenyl)-3-phenyl-2- propen-1-one	ОН
Synonyms:	Alpinetin chalcone, Cardamomin	$\downarrow$ $\downarrow$ $\land$ $\land$
MF:	C <sub>16</sub> H <sub>14</sub> O <sub>4</sub>	
FW:	270.3	
Purity:	≥98%	но
Stability:	≥2 years at -20°C	
Supplied as:	A crystalline solid	
UV/Vis.:	λ <sub>max</sub> : 343 nm	

#### Laboratory Procedures

For long term storage, we suggest that cardamonin be stored as supplied at -20°C. It should be stable for at least two years.

Cardamonin is supplied as a crystalline solid. A stock solution may be made by dissolving the cardamonin in the solvent of choice. Cardamonin is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF), which should be purged with an inert gas. The solubility of cardamonin in ethanol is approximately 1 mg/ml and approximately 25 mg/ml in DMSO and DMF.

Cardamonin is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, cardamonin should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. Cardamonin has a solubility of approximately 0.2 mg/ml in a 1:4 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

#### Description

Cardamonin, isolated from the fruits of Alpinia species, is a chalconoid with anti-inflammatory and antitumor activity.<sup>1,2</sup> It has been shown to suppress nitric oxide and prostaglandin  $E_2$  synthesis, to suppress cyclooxygenase-2 expression, and to inhibit NF- $\kappa$ B signaling.<sup>1,2</sup> It can also target the Bcl-2 protein, inducing apoptosis in cancer cells.<sup>1</sup>
