Product Information

Prostaglandin K₂

Item No. 18900

CAS Registry No.:	275816-51-8	
Formal Name:	9,11-dioxo-15S-hydroxy-prosta-5Z,13E-	
	dien-1-oic acid	0
Synonym:	PGK ₂	
MF:	$C_{20}H_{30}O_5$	С Соон
FW:	350.5	
Purity:	≥98%	
Stability:	≥1 year at -20°C	о́н
Supplied as:	A solution in methyl acetate	
UV/Vis:	λ _{max} : 245 nm	

Laboratory Procedures

For long term storage, we suggest that prostaglandin K₂ (PGK₂) be stored as supplied at -20°C. It should be stable for at least one year.

PGK, is supplied as a solution in methyl acetate. To change the solvent, simply evaporate the methyl acetate under a gentle stream of nitrogen and immediately add the solvent of choice. Solvents such as DMSO, dimethyl formamide, or acetonitrile purged with an inert gas or nitrogen can be used. The solubility of PGK2 in these solvents is approximately 10 mg/ml. Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. We do not recommend storing the aqueous solution for more than one day.

PGK₂ is the 9,11-diketone formed by the oxidation of PGE₂ or PGD₂. Whether this compound exists biologically is uncertain; it is known to be resistant to metabolism by 15-hydroxy PGDH in vitro.¹
