PRODUCT INFORMATION

Thienyldecyl isothiocyanate

Item No. 19653

CAS Registry No.: 288323-41-1
Formal Name: 2-(10-isothiocyanatodecyl)-thiophene
MF: C₁₅H₂₃NS₂
FW: 281.5
Purity: ≥98%
UV/Vis.: λ_{max}: 235 nm
Supplied as: A solution in ethanol
Storage: -20°C
Stability: ≥2 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Thienyldecyl isothiocyanate is supplied as a solution in ethanol. To change the solvent, simply evaporate the ethanol under a gentle stream of nitrogen and immediately add the solvent of choice. Solvents such as ethanol, DMSO, and dimethyl formamide (DMF) purged with an inert gas can be used. The solubility of thienyldecyl isothiocyanate in ethanol is approximately 30 mg/ml and approximately 20 mg/ml in DMSO and DMF.

Thienyldecyl isothiocyanate is sparingly soluble in aqueous solutions. To enhance aqueous solubility, dilute the organic solvent solution into aqueous buffers or isotonic saline. If performing biological experiments, ensure the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. We do not recommend storing the aqueous solution for more than one day.

Description

Thienyldecyl isothiocyanate is an analog of thienylbutyl isothiocyanate that, like many isothiocyanates, demonstrates antiproliferative activity against cancer cells presumably by modulation of xenobiotic-metabolizing enzymes, such as by inhibition of cytochrome P450, and/or by induction of phase II detoxifying enzymes.¹
