Laboratory Procedures

21-desacetyl Deflazacort is supplied as a crystalline solid. A stock solution may be made by dissolving the 21-desacetyl deflazacort in the solvent of choice, which should be purged with an inert gas. 21-desacetyl Deflazacort is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of 21-desacetyl deflazacort in ethanol is approximately 1 mg/ml and approximately 30 mg/ml in DMSO and DMF.

21-desacetyl Deflazacort is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, 21-desacetyl deflazacort should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. 21-desacetyl Deflazacort has a solubility of approximately 0.25 mg/ml in a 1:3 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

21-desacetyl Deflazacort is the active glucocorticoid derived from the prodrug deflazacort (Item No. 20386). 21-desacetyl Deflazacort and related glucocorticoids have anti-inflammatory and immunosuppressant effects, as well as benefits in certain muscular dystrophies.¹⁻³
