### Laboratory Procedures

Lithocholic acid 3-sulfate (sodium salt) is supplied as a crystalline solid. A stock solution may be made by dissolving the lithocholic acid 3-sulfate (sodium salt) in the solvent of choice. Lithocholic acid 3-sulfate (sodium salt) is soluble in the organic solvent methanol, which should be purged with an inert gas, at a concentration of approximately 0.1 mg/ml.

### Description

Lithocholic acid 3-sulfate is a metabolite of the secondary bile acid lithocholic acid (Item No. 20253).<sup>1</sup> It is water soluble and the primary form of lithocholic acid in the bile duct. Lithocholic acid 3-sulfate forms a complex with calcium *in vitro*.<sup>2</sup> Biliary secretion of lithocholic acid 3-sulfate is increased in a rat model of diabetes induced by streptozotocin (Item No. 13104).<sup>3</sup>
