Laboratory Procedures

Kibdelone C is supplied as a solid. A stock solution may be made by dissolving the kibdelone C in the solvent of choice, which should be purged with an inert gas. Kibdelone C is soluble in organic solvents such as ethanol, methanol, DMSO, and dimethyl formamide.

Description

Kibdelone C is a member of a family of natural heterocyclic polyketides first isolated from a soil actinomycete, *Kibdelosporangium*.¹ Kibdelones have been described as having potent and selective cytotoxicity against a panel of human tumor cell lines, and kibdelone C has low nanomolar effectiveness in these assays.^{1,2} Kibdelone C disrupts the actin cytoskeleton without directly binding actin or affecting its polymerization *in vitro*.²
