Laboratory Procedures

3-Propylxanthine is supplied as a crystalline solid. A stock solution may be made by dissolving the 3-propylxanthine in the solvent of choice. 3-Propylxanthine is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide, which should be purged with an inert gas. The solubility of 3-propylxanthine in these solvents is approximately 0.5, 30, and 20 mg/ml, respectively.

3-Propylxanthine is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, 3-propylxanthine should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. 3-Propylxanthine has a solubility of approximately 0.25 mg/ml in a 1:3 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

3-Propylxanthine is a xanthine derivative that antagonizes adenosine receptors (K_i s = 44, 32, and 6.3 μ M for A_1 , A_{2A} , and A_{2B} , respectively) and cAMP phosphodiesterase (K_i = 42 μ M).¹⁻³ Through these actions, 3-propylxanthine induces smooth muscle relaxation, blocks smooth muscle contraction and VEGF secretion driven by adenosine receptor agonists, and reduces bronchial hyperresponsiveness.^{2,4,5}
