### Laboratory Procedures

GLPG0187 is supplied as a crystalline solid. A stock solution may be made by dissolving the GLPG0187 in the solvent of choice. GLPG0187 is soluble in organic solvents such as DMSO and dimethyl formamide, which should be purged with an inert gas. The solubility of GLPG0187 in these solvents is approximately 3 and 1 mg/ml, respectively.

GLPG0187 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, GLPG0187 should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. GLPG0187 has a solubility of approximately 0.5 mg/ml in a 1:1 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

### Description

GLPG0187 is a nonpeptide antagonist of α<sub>v</sub> integrin receptors (IC<sub>50</sub>s = 1.2-3.7 nM).<sup>1</sup> It inhibits osteoclastogenesis, bone resorption, and angiogenesis *in vitro* and *in vivo* in mice, which are all hallmarks of bone marrow invasion in metastatic prostate cancer. GLPG0187 reduces epithelial-mesenchymal transition (EMT) and migration of PC-3M-Pro4/luc cells in a dose-dependent manner without inhibiting cell growth. GLPG0187 also induces detachment and necrosis of GL-261 and SMA-560 murine glioma cells.<sup>2</sup> Formulations containing GLPG0187 are being tested in Phase I clinical trials for the treatment of high-grade gliomas and other advanced solid malignancies.<sup>3</sup>
