Laboratory Procedures

4-Chlorophenyl-2-pyridinylmethanol is supplied as a crystalline solid. A stock solution may be made by dissolving the 4-chlorophenyl-2-pyridinylmethanol in the solvent of choice, which should be purged with an inert gas. 4-Chlorophenyl-2-pyridinylmethanol is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of 4-chlorophenyl-2-pyridinylmethanol in ethanol is approximately 25 mg/ml and approximately 30 mg/ml in DMSO and DMF.

4-Chlorophenyl-2-pyridinylmethanol is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, 4-chlorophenyl-2-pyridinylmethanol should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. 4-Chlorophenyl-2-pyridinylmethanol has a solubility of approximately 0.1 mg/ml in a 1:9 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description
