### Laboratory Procedures

Taurocholic acid-d<sub>4</sub> (TCA-d<sub>4</sub>) (sodium salt) is intended for use as an internal standard for the quantification of TCA (Item No. 16215) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

### Description

TCA is a taurine-conjugated form of the primary bile acid cholic acid (Item No. 20250).<sup>1</sup> Serum levels of TCA are decreased in patients with Crohn's disease and those with ulcerative colitis with no extraintestinal manifestations, but are increased in patients with ulcerative colitis accompanied by hepatobiliary disease.<sup>2</sup>
