Laboratory Procedures

C18 Phytoceramide (t18:0/18:0) (Cer(t18:0/18:0)) is supplied as a solid. A stock solution may be made by dissolving the SPS in the solvent of choice. SPS is soluble in a 1:1 (warm) solution of chloroform:methanol.

Description

Cer(t18:0/18:0) is a bioactive sphingolipid found in *S. cerevisiae*, wheat grains, and the stratum corneum layer of mammalian epidermis.¹⁻⁴ Cer(t18:0/18:0) is composed of a phytosphingosine (Item No. 20217) backbone amine-linked to a C18 fatty acid chain. Cer(t18:0/18:0) has a role in regulation of apoptosis, cell differentiation, proliferation of smooth muscle cells, and inhibition of the mitochondrial respiratory chain.⁵⁻⁷ It also inhibits expression of the allergic cytokines IL-4, TNF- α , and transcription factors c-Jun and NF- κ B in histone-stimulated murine skin tissue.¹ Formulations containing cer(t18:0/18:0) have been used in cosmetics as a skin protectants as they reduce water loss to prevent epidermal dehydration and irritation.^{2,3}
