PRODUCT INFORMATION

Vortioxetine (hydrobromide)

Item No. 23694

CAS Registry No.: 960203-27-4
Formal Name: 1-[2-[(2,4-dimethylphenyl)thio]phenyl]-piperazine, monohydrobromide
MF: C₁₈H₂₂N₂S • HBr
FW: 379.4
Purity: ≥95%
Supplied as: A solid
Storage: 4°C
Stability: ≥1 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Vortioxetine (hydrobromide) is supplied as a solid. A stock solution may be made by dissolving the vortioxetine (hydrobromide) in the solvent of choice. Vortioxetine (hydrobromide) is slightly soluble in organic solvents such as DMSO and methanol.

Description

Vortioxetine is a multimodal serotonergic agent that acts as a serotonin (5-HT; Item No. 14332) reuptake inhibitor ($K_i = 1.6$ nM) and binds to the 5-HT_{1A}, 5-HT_{1B}, 5-HT_{3A}, and 5-HT₇ receptors (K_i s = 15, 33, 3.7, and 19 nM, respectively).¹ It also binds to the β_1 -adrenergic receptor ($K_i = 46$ nM). It acts as an antagonist at 5-HT_{3A} and 5-HT₇, a partial agonist at 5-HT_{1B}, and a full agonist at 5-HT_{1A} receptors. Vortioxetine is selective for the serotonin transporter (SERT) over the dopamine and norepinephrine transporters (IC_{50} s = 5.3, 890, and 140 nM, respectively). It has affinity for histamine H₂, melanocortin 4, β_2 -adrenergic, 5-HT_{2C}, and 5-HT₆ receptors with K_i values greater than 180 nM, but it is selective over the majority of targets in a panel of 75 ion channels, G protein-coupled receptors, enzymes, and transporters. Vortioxetine (5 or 10 mg/kg per day) increases 5-HT levels *in vivo* in rat brain and decreases occupancy at SERT. At acute and chronic doses of 5 mg/kg, but not 10 mg/kg, it increases the time mice spend in the center of the open field test, increases mobility in the forced swim test, and decreases the latency to feed in the novelty suppressed feeding test.² It also increases proliferation and survival of adult-born granule cells in the hippocampus. Formulations containing vortioxetine have been used in the treatment of major depressive disorder.
