### Laboratory Procedures

Diflorasone diacetate is supplied as a solid. A stock solution may be made by dissolving the diflorasone diacetate in the solvent of choice, which should be purged with an inert gas. Diflorasone diacetate is slightly soluble in methanol and chloroform.

### Description

Diflorasone is a corticosteroid with anti-inflammatory activity.<sup>1</sup> It reduces production of the inflammatory cytokines Il-6, Il-4, and macrophage inflammatory protein-2 (Mip-2) and completely inhibits swelling in the ears of toluene-2,4-diisocyanate-sensitized mice following topical administration of 20  $\mu$ L of a 0.05% solution. Diflorasone inhibits RANTES and thymus and activation regulated chemokine (TARC) in a dinitrochlorobenzene-induced mouse model of allergic contact dermatitis.<sup>2</sup> It also inhibits proliferation of human keratinocytes *in vitro* and reduces epidermal thickening in a mouse model of psoriasis induced by imiquimod (Item No. 14956).<sup>3</sup>
