# PRODUCT INFORMATION

## Hexaminolevulinate (hydrochloride)

Item No. 23949

**CAS Registry No.:** 140898-91-5  
**Formal Name:** 5-amino-4-oxo-pentanoic acid, hexyl ester, monohydrochloride  
**Synonyms:** 5-Aminolevulinic Acid hexyl ester, Hexyl 5-aminolevulinate  
**MF:** C<sub>11</sub>H<sub>21</sub>NO<sub>3</sub> • HCl  
**FW:** 251.8  
**Purity:** ≥95%  
**UV/Vis.:** λ<sub>max</sub>: 270 nm  
**Supplied as:** A crystalline solid  
**Storage:** -20°C  
**Stability:** ≥2 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

### Laboratory Procedures

Hexaminolevulinate (hydrochloride) is supplied as a crystalline solid. A stock solution may be made by dissolving the hexaminolevulinate (hydrochloride) in the solvent of choice. Hexaminolevulinate (hydrochloride) is soluble in organic solvents such as DMSO and dimethyl formamide, which should be purged with an inert gas. The solubility of hexaminolevulinate (hydrochloride) in these solvents is approximately 10 and 5 mg/ml, respectively.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of hexaminolevulinate (hydrochloride) can be prepared by directly dissolving the crystalline solid in aqueous buffers. The solubility of hexaminolevulinate (hydrochloride) in PBS, pH 7.2, is approximately 10 mg/ml. We do not recommend storing the aqueous solution for more than one day.

### Description

Hexaminolevulinate is a lipophilic, hexyl ester prodrug form of 5-aminolevulinic acid (Item No. 9001902).<sup>1</sup> It produces equivalent protoporphyrin IX (PpIX) induction in WiDr and NHIK 3025 carcinoma cells at concentrations approximately 100-fold lower than 5-aminolevulinic acid. *In vivo*, hexaminolevulinate penetrates upper skin layers more effectively in pigs and induces higher levels of PpIX fluorescence in nude mice when compared with 5-aminolevulinic acid following topical administration.<sup>2</sup> Formulations containing hexaminolevulinate have been used in imaging and photodynamic therapy for a variety of urogenital cancers.

#### WARNING

THIS PRODUCT IS FOR RESEARCH ONLY - NOT FOR HUMAN OR VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

#### SAFETY DATA

This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the complete Safety Data Sheet, which has been sent via email to your institution.

#### WARRANTY AND LIMITATION OF REMEDY

Buyer agrees to purchase the material subject to Cayman's Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.
