### Description

Fludrocortisone acetate is the acetate form of the synthetic corticosteroid fludrocortisone, which is a mineralocorticoid receptor agonist.<sup>1</sup> Fludrocortisone acetate (0.1-5  $\mu$ g/animal) promotes sodium retention in rats in a dose-dependent manner with 37% of sodium excreted compared with control when used at a dose of 5  $\mu$ g/animal.<sup>2</sup> Formulations containing fludrocortisone acetate have been used in the treatment of Addison's disease.
