### Laboratory Procedures

Fucosylated ganglioside G<sub>M1</sub> (ammonium salt) is supplied as a solid. A stock solution may be made by dissolving the fucosylated ganglioside G<sub>M1</sub> (ammonium salt) in the solvent of choice. Fucosylated ganglioside G<sub>M1</sub> (ammonium salt) is soluble in a 2:1:0.1 solution of chloroform:methanol:DI water.

### Description

Fucosylated ganglioside G<sub>M1</sub> is a fucose-containing glycosphingolipid that was originally found in bovine thyroid tissue.<sup>1</sup> It has been found in isolated human small cell lung cancer (SCLC) tumors but is rarely found in other types of lung cancer tumors or normal tissue.<sup>2</sup> Fucosylated ganglioside G<sub>M1</sub> is shed from SCLC cells *in vitro* and *in vivo* in SCLC nude mouse xenograft models and can be detected in human plasma.<sup>3</sup> It binds to cholera toxin when expressed in rat C6 glioma cultured cells, increasing intracellular cAMP to similar levels as cells expressing ganglioside G<sub>M1</sub> (Item No. 19579).<sup>4</sup>
