# PRODUCT INFORMATION

## Benzomalvin A

Item No. 25016

**CAS Registry No.:** 157047-96-6  
**Formal Name:** (6S,7S)-6,7-dihydro-6-methyl-7-(phenylmethyl)-quinazolino[3,2-a][1,4]benzodiazepine-5,13-dione  
**Synonym:** (-)-Benzomalvin A  
**MF:** C<sub>24</sub>H<sub>19</sub>N<sub>3</sub>O<sub>2</sub>  
**FW:** 381.4  
**Purity:** ≥95%  
**Supplied as:** A solid  
**Storage:** -20°C  
**Stability:** ≥2 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

### Laboratory Procedures

Benzomalvin A is supplied as a solid. A stock solution may be made by dissolving the benzomalvin A in the solvent of choice. Benzomalvin A is soluble in organic solvents such as methanol, ethanol, DMSO, and dimethyl formamide, which should be purged with an inert gas.

### Description

Benzomalvin A is a fungal metabolite produced by *Penicillium*.<sup>1,2</sup> It inhibits yeast  $\alpha$ -glucosidase *in vitro* ( $IC_{50}$  = 383.2  $\mu$ M).<sup>1</sup> *In vivo*, benzomalvin A (3.1-31.6 mg/kg) decreases plasma glucose levels in mice following administration of sucrose. It also decreases the plasma glucose postprandial peak in nicotinamide-streptozotocin-induced hyperglycemic mice when administered at a dose of 10 mg/kg. Benzomalvin A also acts as an antagonist of neurokinin-1 (NK<sub>1</sub>) receptors, inhibiting binding of substance P (Item No. 24035) to guinea pig, rat, and human NK<sub>1</sub> ( $K_s$  = 12, 42, and 43  $\mu$ M, respectively).<sup>2</sup>
