# PRODUCT INFORMATION

## all-trans Retinoic Acid-d<sub>5</sub>

Item No. 25415

Formal Name: (2E,4E,6E,8E)-9-(6,6-dimethyl-2-

(methyl-d<sub>3</sub>)cyclohex-1-en-1-yl-3,3-d<sub>2</sub>)-3,7-

dimethylnona-2,4,6,8-tetraenoic acid

Synonyms: atRA-d<sub>5</sub>, RA-d<sub>5</sub>, Vitamin A Acid-d<sub>5</sub>

MF:  $C_{20}H_{23}D_5O_2$ 

305.5 FW:

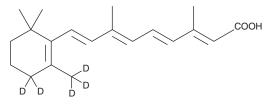

**Chemical Purity:** ≥98% (all-trans Retinoic Acid)

Deuterium

Incorporation:  $\geq$ 99% deuterated forms (d<sub>1</sub>-d<sub>5</sub>);  $\leq$ 1% d<sub>0</sub>

Supplied as: A solid -20°C Storage: Stability: ≥2 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

#### **Laboratory Procedures**

all-trans Retinoic acid-d<sub>s</sub> is intended for use as an internal standard for the quantification of all-trans retinoic acid (Item No. 11017) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

all-trans Retinoic acid-d<sub>5</sub> is supplied as a solid. A stock solution may be made by dissolving the all-trans retinoic acid- $d_5$  in the solvent of choice. all-trans Retinoic acid- $d_5$  is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF), which should be purged with an inert gas. The solubility of all-trans retinoic acid-d<sub>5</sub> in ethanol is approximately 0.5 mg/ml and approximately 20 mg/ml in DMSO and DMF.

#### Description

all-trans Retinoic acid is a metabolite of vitamin A and a ligand for retinoic acid receptors (RARs) with IC50 values of 9, 3, and 10 nM for RARα, RARβ, and RARγ, respectively, in radioligand binding assays. 1 It induces expression of a luciferase reporter in COS-7 cells expressing RAR $\alpha$ , RAR $\beta$ , or RAR $\gamma$  (EC<sub>50</sub>s = 169, 9, and 2 nM, respectively), all-trans Retinoic acid (12 nmol) reduces papilloma formation induced by phorbol 12-myristate 13-acetate (TPA; Item No. 10008014) in mice.<sup>2</sup> It reduces bile duct proliferation, hydroxyproline levels, and liver inflammation in a rat model of  $\alpha$ -naphthylisothiocyanate-induced chronic cholestasis and reduces plasma levels of alkaline phosphatase and bile salts in the Mdr2-/- mouse model of cholestasis.3 all-trans Retinoic acid also reduces hepatic fat accumulation, triglycerides, body weight, and serum glucose levels in mice with Western diet-induced obesity.4
