Laboratory Procedures

Cholesteryl homo- γ -linolenate is supplied as an oil. A stock solution may be made by dissolving the cholesteryl homo- γ -linolenate in the solvent of choice. Cholesteryl homo- γ -linolenate is soluble in the organic solvent chloroform, which should be purged with an inert gas, at a concentration of approximately 10 mg/ml.

Description

Cholesteryl homo- γ -linolenate is a cholesterol ester. It accumulates in the adrenal gland of rabbits fed a diet high in linolenic acid.¹ Levels of cholesteryl homo- γ -linolenate are decreased and positively correlate with cognitive decline in HIV-infected humans.²
