Laboratory Procedures

Butyryl-L-carnitine (chloride) is supplied as a crystalline solid. A stock solution may be made by dissolving the butyryl-L-carnitine (chloride) in the solvent of choice. Butyryl-L-carnitine (chloride) is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF), which should be purged with an inert gas. The solubility of butyryl-L-carnitine (chloride) in ethanol and DMF is approximately 20 mg/ml and approximately 10 mg/ml in DMSO.

Description

Butyryl-L-carnitine is a butyrate ester of carnitine.¹ It is an inhibitor of intestinal transporters, blocking carnitine uptake by the carnitine transporter and glycine transport by the amino acid transporter in human retinal pigment epithelial (HRPE) cells (IC₅₀s = 1.5 μM and 4.6 mM, respectively).
