Laboratory Procedures

Hexanoyl-L-carnitine (chloride) is supplied as a solid. A stock solution may be made by dissolving the hexanoyl-L-carnitine (chloride) in the solvent of choice, which should be purged with an inert gas. Hexanoyl-L-carnitine (chloride) is slightly soluble in methanol.

Hexanoyl-L-carnitine (chloride) is slightly soluble in aqueous solutions. To enhance aqueous solubility, dilute the organic solvent solution into aqueous buffers or isotonic saline. If performing biological experiments, ensure the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. We do not recommend storing the aqueous solution for more than one day.

Description

Hexanoyl-L-carnitine is a medium-chain acylcarnitine. It has been used in the synthesis of acylcarnitine benzyl esters.¹
