Laboratory Procedures

Lauroyl-L-carnitine-12,12,12-d₃ (chloride) is intended for use as an internal standard for the quantification of lauroyl-L-carnitine (Item No. 26550) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

Lauroyl-L-carnitine-12,12,12-d₃ (chloride) is supplied as a solid. A stock solution may be made by dissolving the lauroyl-L-carnitine-12,12,12-d₃ (chloride) in the solvent of choice, which should be purged with an inert gas. Lauroyl-L-carnitine-12,12,12-d₃ (chloride) is slightly soluble in methanol.

Description

Lauroyl-L-carnitine is an acylcarnitine and a surfactant.¹ It has been used to permeabilize porcine enterocytes for delivery of the polar fluorescent probe lucifer yellow (Item No. 25573).
