Laboratory Procedures

C18 Phytoceramide-d₃ (t18:0/18:0-d₃) (Cer(t18:0/18:0)-d₃) is intended for use as an internal standard for the quantification of Cer(t18:0/18:0) (Item No. 22686) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

Cer(t18:0/18:0)-d₃ is supplied as a solid. A stock solution may be made by dissolving the cer(t18:0/18:0)-d₃ in the solvent of choice. Cer(t18:0/18:0)-d₃ is soluble in organic solvents such as chloroform, DMSO, and dimethyl formamide, which should be purged with an inert gas.

Description

Cer(t18:0/18:0) is a bioactive sphingolipid found in *S. cerevisiae*, wheat grains, and the stratum corneum layer of mammalian epidermis.¹⁻⁴ Cer(t18:0/18:0) is composed of a phytosphingosine (Item No. 20217) backbone amine-linked to a C18 fatty acid chain. Cer(t18:0/18:0) has a role in regulation of apoptosis, cell differentiation, proliferation of smooth muscle cells, and inhibition of the mitochondrial respiratory chain.⁵⁻⁷ It also inhibits expression of the allergic cytokines IL-4, TNF-α, and transcription factors c-Jun and NF-κB in histone-stimulated murine skin tissue.¹ Formulations containing cer(t18:0/18:0) have been used in cosmetics as a skin protectants as they reduce water loss to prevent epidermal dehydration and irritation.^{2,3}
