Laboratory Procedures

CGP 52432 is supplied as a solid. A stock solution may be made by dissolving the CGP 52432 in the solvent of choice. CGP 52432 is soluble in the organic solvent DMSO, which should be purged with an inert gas.

Description

CGP 52432 is an antagonist of GABA_B receptors.¹ It selectively reverses (-)-baclofen-induced inhibition of potassium-evoked GABA release over glutamate or somatostatin release (IC₅₀s = 0.085, 3.35, and 9.26 μM, respectively) from rat cortical synaptosomes. CGP 52432 (10 μM) reduces paired-pulse inhibition of monosynaptic inhibitory potentials (IPSPs) by 80% in CA1 pyramidal neurons in rat hippocampal slices.² It increases cell proliferation in the ventral subgranular zone of the dentate gyrus when administered at a dose of 3 mg/kg per day for 21 days and reduces immobility in the forced-swim test when administered at 10 mg/kg in stress-sensitive BALB/c mice.³ CGP 52432 (30 mg/kg) increases locomotor activity in mice.⁴ It also inhibits the analgesic effects of isovaline, GABA, and baclofen (Item No. 18600) in a mouse model of hindpaw allodynia induced by prostaglandin E₂ (PGE₂; Item No. 14010).⁵
