### Laboratory Procedures

Chrodrimanin B is supplied as a solid. A stock solution may be made by dissolving the chrodrimanin B in the solvent of choice, which should be purged with an inert gas. Chrodrimanin B is soluble in organic solvents such as ethanol, methanol, and DMSO. The solubility of chrodrimanin B in ethanol is approximately 1 mg/ml.

### Description

Chrodrimanin B is a meroterpenoid fungal metabolite that has been found in *Talaromyces* species.<sup>1</sup> It has insecticidal activity against third instar silkworm larvae (LD<sub>50</sub> = 10 µg/g of diet). Chrodrimanin B selectively inhibits the silkworm GABA receptor RDL (IC<sub>50</sub> = 1.13 nM) over human α1β2γ2 subunit-containing GABA receptors (IC<sub>50</sub> = 1.48 µM).<sup>2</sup> The structure of thailandolide B, originally described as a C-9 epimer of chrodrimanin B, was revised in 2012 and is identical to that of chrodrimanin B.<sup>1</sup>
