Laboratory Procedures

Norgestrel-d₆ is intended for use as an internal standard for the quantification of norgestrel (Item No. 10006319) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

Norgestrel-d₆ is supplied as a solid. A stock solution may be made by dissolving the norgestrel-d₆ in the solvent of choice, which should be purged with an inert gas. Norgestrel-d₆ is slightly soluble in chloroform (warmed) and methanol (sonicated).

Description

Norgestrel is a synthetic progestin and a racemic mixture of dextronorgestrel and levonorgestrel (Item No. 10006318), of which levonorgestrel is the biologically active component.¹ *In vivo*, norgestrel administered *via* intrauterine device (IUD) prevents pregnancy in rats.² Formulations containing norgestrel have been used as contraceptives.
