Laboratory Procedures

Lyo-globotetraosylceramide (d18:1) is supplied as a solid. A stock solution may be made by dissolving the lyo-globotetraosylceramide (d18:1) in the solvent of choice, which should be purged with an inert gas. Lyo-globotetraosylceramide (d18:1) is soluble in a 2:1:0.1 solution of chloroform:methanol:water.

Description

Lyo-globotetraosylceramide is a form of globotetraosylceramide (Gb4) lacking the fatty acyl group.¹ It binds to the Shiga-like toxin pig verotoxin of edema disease (VTE) in a glycolipid binding assay.¹ Lyo-globotetraosylceramide is acylated to stearic acid (Item No. 10011298) via a condensation reaction mediated by sphingolipid ceramide N-deacylase to form a ceramide.²
