## Laboratory Procedures

AZ 12216052 is supplied as a crystalline solid. A stock solution may be made by dissolving the AZ 12216052 in the solvent of choice, which should be purged with an inert gas. AZ 12216052 is soluble in the organic solvent DMSO.

## Description

AZ 12216052 is a positive allosteric modulator of metabotropic glutamate receptor 8 (mGluR8).<sup>1</sup> It potentiates glutamate-induced [<sup>35</sup>S]GTPγS binding in GHEK cells expressing human mGluR8b (EC<sub>50</sub> = 1 μM). In a cell-based model of Parkinson's disease, AZ 12216052 inhibits MPP<sup>+</sup>-induced decreases in the viability of undifferentiated SH-SY5Y cells when used at concentrations ranging from 0.001 to 1 μM and in retinoic acid-differentiated SH-SY5Y cells at 0.1 and 1 μM.<sup>2</sup> AZ 12216052 (10 mg/kg) increases the time spent in the open areas of the elevated zero maze and reduces the acoustic startle response in mice, indicating anxiolytic-like activity in response to avoidable and unavoidable anxiogenic stimuli, respectively.<sup>1</sup>
