Laboratory Procedures

Ani 9 is supplied as a solid. A stock solution may be made by dissolving the ani 9 in the solvent of choice, which should be purged with an inert gas. Ani 9 is soluble in the organic solvent DMSO at a concentration of approximately 25 mg/ml.

Description

Ani 9 is an inhibitor of the calcium-activated chloride channel (CaCC) anoctamin 1 (ANO1) that blocks ATP-induced apical membrane chloride currents in ANO1-expressing Fischer rat thyroid (FRT) cells (IC₅₀ = 77 nM).¹ It is selective for ANO1 over ANO2 at 10 μM and the cystic fibrosis transmembrane conductance regulator (CFTR) and epithelial sodium channel (ENaC) at 30 μM. Ani 9 inhibits ATP-induced quenching of a fluorescent intracellular halide sensor in PC3 prostate cancer cells and Capan-1 pancreatic carcinoma cells in a concentration-dependent manner.
