PRODUCT INFORMATION

Estragole

Item No. 29824

CAS Registry No.: 140-67-0
Formal Name: 1-methoxy-4-(2-propen-1-yl)-benzene
Synonyms: 4-Allylanisole, Methyl Chavicol, NSC 404113
MF: C₁₀H₁₂O
FW: 148.2
Purity: ≥98%
UV/Vis.: λ_{max}: 226, 278, 285 nm
Supplied as: A liquid
Storage: -20°C
Stability: ≥2 years
Item Origin: Synthetic

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Estragole is supplied as a liquid. A stock solution may be made by dissolving the estragole in the solvent of choice, which should be purged with an inert gas. Estragole is soluble in the organic solvent dimethyl formamide at a concentration of approximately 10 mg/ml. Estragole is also slightly soluble in ethanol.

Description

Estragole is a volatile compound that has been found in basil oil and has diverse biological activities.¹⁻⁴ It induces mortality in 100% of adult *C. capitata*, *B. dorsalis*, and *B. cucurbitae* fruit flies exposed to wicks impregnated with estragole at concentrations greater than or equal to 2.5%.¹ Estragole (60 mg/kg) reduces carrageenan-induced paw edema in mice.² It increases survival in a mouse model of infection with the ME49 strain of *T. gondii* when administered at a dose of 100 mg/kg per day.³ Estragole (2.5 μmol/g, p.o., twice per week) increases the percentage of hepatoma-bearing mice and the average number of hepatomas per mouse in male, but not female, mice when administered prior to weaning.⁴
