### Laboratory Procedures

GLPG0492 is supplied as a solid. A stock solution may be made by dissolving the GLPG0492 in the solvent of choice, which should be purged with an inert gas. GLPG0492 is slightly soluble in ethanol and DMSO.

### Description

GLPG0492 is a selective androgen receptor modulator (SARM).<sup>1</sup> It activates the androgen receptor in a transactivation assay (EC<sub>50</sub> = 12 nM in HeLa cells expressing the human receptor). GLPG0492 (10 mg/kg per day) increases levator ani muscle weight, a marker of anabolic activity, but has no effect on ventral prostate weight, a marker of androgenic activity, in castrated rats. It increases twitch tension in isolated diaphragm strips, as well as increases the total distance run in a treadmill test and decreases gastrocnemius muscle fibrosis in the exercised-*mdx* mouse model of muscular dystrophy when administered at a dose of 30 mg/kg.<sup>2</sup> GLPG0492 also reverses immobilization-induced muscle atrophy in a mouse model of hindlimb immobilization.<sup>3</sup>
