# PRODUCT INFORMATION

## Istradefylline-<sup>13</sup>C-d<sub>3</sub>

Item No. 31240

**Formal Name:** (E)-8-(3,4-dimethoxystyryl)-1,3-diethyl-7-(methyl-<sup>13</sup>C-d<sub>3</sub>)-3,7-dihydro-1H-purine-2,6-dione  
**MF:** C<sub>19</sub>[<sup>13</sup>C]H<sub>21</sub>D<sub>3</sub>N<sub>4</sub>O<sub>4</sub>  
**FW:** 388.5  
**Chemical Purity:** ≥98% (Istradefylline)  
**Deuterium Incorporation:** ≥99% deuterated forms (d<sub>1</sub>-d<sub>3</sub>); ≤1% d<sub>0</sub>  
**Supplied as:** A solid  
**Storage:** -20°C  
**Stability:** ≥2 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

### Laboratory Procedures

Istradefylline-<sup>13</sup>C-d<sub>3</sub> is intended for use as an internal standard for the quantification of istradefylline (Item No. 22958) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

Istradefylline-<sup>13</sup>C-d<sub>3</sub> is supplied as a solid. A stock solution may be made by dissolving the istradefylline-<sup>13</sup>C-d<sub>3</sub> in the solvent of choice, which should be purged with an inert gas. Istradefylline-<sup>13</sup>C-d<sub>3</sub> is soluble in methanol and DMSO.

### Description

Istradefylline is an adenosine receptor 2A (A<sub>2A</sub>) antagonist (K<sub>i</sub> = 2.2 nM in a radioligand binding assay).<sup>1</sup> *In vivo*, istradefylline inhibits catalepsy induced by haloperidol (Item No. 12014) with an ED<sub>50</sub> value of 0.23 mg/kg in rats. Oral administration of istradefylline alleviates postural defects in a dose-dependent manner without inducing dyskinesias or hyperactivity in an MPTP-induced marmoset model of Parkinson's disease.<sup>2</sup> It also decreases bradykinesias induced by L-DOPA (Item No. 13248) and improves attentional and working memory deficits in an MPTP-induced macaque model of Parkinson's disease.<sup>3</sup> Formulations containing istradefylline are used to extend on-time in Parkinson's disease patients experiencing motor fluctuations.
